

0.1 Weakening Definition

0.1.1 Relation

We define the ternary weaking relation $w : \Gamma' \triangleright \Gamma$ using the following rules.

- (Id) $\frac{\Gamma \text{Ok}}{\iota : \Gamma \triangleright \Gamma}$
- (Project) $\frac{\omega : \Gamma' \triangleright \Gamma \times \nexists \text{dom}(\Gamma')}{\omega \pi : \Gamma, x : A \triangleright \Gamma}$
- (Extend) $\frac{\omega : \Gamma' \triangleright \Gamma \times \nexists \text{dom}(\Gamma') \ A \leq B}{w \times : \Gamma', x : A \triangleright \Gamma, x : B}$

0.1.2 Ok definition

0.1.3 Dom definition

0.1.4 Weakening Denotations

0.2 Weakening Theorems

0.2.1 Theorem 1

If $\omega : \Gamma' \triangleright \Gamma$ and ΓOk then $\Gamma' \text{Ok}$

Proof TODO: this

0.2.2 Theorem 2

If $\Gamma \vdash t : \tau$ and $\omega : \Gamma' \triangleright \Gamma$ then $\Gamma' \vdash t : \tau$

Proof Proved in parallel with theorem 3 below

0.2.3 Theorem 3

If $\omega : \Gamma' \triangleright \Gamma$ and $\Delta = \llbracket \Gamma \vdash t : \tau \rrbracket_M$ and $\Delta' = \llbracket \Gamma' \vdash t : \tau \rrbracket_M$ then

$$\Delta \circ \llbracket \omega \rrbracket_M = \Delta' : \Gamma' \rightarrow \llbracket \tau \rrbracket_M$$

Proof TODO: this, induct over typing relation/definition of Denotations
